

Digital Literacy Project Report

Name: Aniket Singh

Reg No.: 25BAI11141

Branch: CSE (AI/ML)

Year: 1st Year

Course Code: CSE0001

Date: 23/03/2026

Introduction

Digital literacy is an essential skill in today's technology-driven world. As a student, understanding how to use digital tools effectively, communicate professionally, and stay safe online is very important. This project focuses on building a digital literacy portfolio by completing various practical tasks. These tasks include creating an infographic, setting up professional profiles, exploring coding and collaboration platforms, learning email etiquette, and understanding cybercrime awareness. Through this project, I gained hands-on experience with important digital tools and platforms that will help me in my academic and professional journey. It also helped me understand the importance of responsible and safe behavior in the digital world.

Task 1 – Infographic

In this task, I created a digital literacy awareness infographic using Canva. The infographic highlights key topics such as the meaning of digital literacy, useful digital tools for students, and safe internet practices. I used simple design elements, icons, and bullet points to make the content visually appealing and easy to understand. The goal was to create a one-page visual that can help students quickly learn important concepts related to digital literacy. While creating the infographic, I found it slightly challenging to organize all the information in a limited space without making it look crowded. However, this task helped me improve my design and presentation skills and understand how to communicate information effectively through visuals.

Task 2 – Digital Portfolio

In this task, I created my digital portfolio by setting up profiles on GitHub, LinkedIn, and Kaggle. GitHub is used to showcase coding projects and manage version control, while LinkedIn helps in building a professional network and connecting with industry professionals. Kaggle is a platform used for data science and machine learning practice. I updated my profiles with basic information such as education, skills, and career interests. These platforms will help me build my online presence and showcase

my work over the next four years. This task made me realize the importance of having a professional digital identity and how it can help in internships and job opportunities in the future.

Task 3 – Platforms

In this task, I explored coding and collaboration platforms. I used Hacker Rank to solve a beginner-level programming problem, which helped me understand basic problem-solving and coding skills. It was a simple yet useful experience that introduced me to coding practice platforms. I also created a Google Form titled “Digital Literacy Awareness Quiz” with five questions to test basic knowledge of digital literacy among students. Additionally, I explored how responses are collected and viewed in Google Sheets. These tools are very useful for academic purposes, collaboration, and improving technical skills. This task helped me understand how technology can be used for learning, assessment, and communication.

Task 4 – Email Etiquette

In this task, I learned how to write professional emails and understand proper email etiquette. I drafted two emails: one requesting an assignment deadline extension and another expressing interest in a summer internship. Both emails followed proper structure, including subject line, greeting, body, and sign-off. I also created a checklist of social media do’s and don’ts to promote responsible online behaviour. Poor digital communication can lead to misunderstandings and missed opportunities. For example, sending an unprofessional email to a professor may result in rejection. This task helped me understand the importance of clear, respectful, and professional communication in academic and professional environments.

Task 5 – Cybercrime Awareness

In this task, I studied cybercrime, specifically UPI payment fraud, which is very common in India. I learned how fraudsters trick users into approving fake payment requests or sharing sensitive information. This research helped me understand how easily people can become victims if they are not aware. I also created a prevention checklist with important safety tips such as not sharing OTPs, verifying transactions, and reporting fraud through the National Cyber Crime Portal and helpline 1930. I was surprised to see how common these scams are. One habit I will change is carefully checking every transaction request before approving it.

Conclusion

This project helped me develop essential digital literacy skills that are important for both academic and professional growth. I learned how to use digital tools effectively, maintain a professional online presence, and communicate properly through emails. I also gained awareness about cyber threats and how to stay safe online. Overall, this project was a valuable learning experience that improved my understanding of the digital world and prepared me for future challenges.
